

Dynamic System Property: *atis* **Bifurcated Behaviorness**

(*Dynamic system properties* are those properties that are part of the theory and describe patterns in time as change occurs within a system or between a system and its negasystem.)

Bifurcated behaviorness, $\varepsilon\widehat{\mathcal{B}}(\mathfrak{S})$, =_{df} a change in dispositional behavior.

$$\varepsilon\widehat{\mathcal{B}}(\mathfrak{S}) =_{df} \Delta_{\mathcal{D}}\widehat{\mathcal{B}}(\mathfrak{S})$$

Bifurcated behaviorness is a change in system dispositional behavior.
