

System Type: *atis* CommandSubsystem

(*System type* is part of the metatheory and describes configurations and properties that characterize a specific system.)

Command subsystem, ${}^c\mathcal{W}$, =_{df} the subsystem that controls the system as a dynamic teleological system.

$${}^c\mathcal{W} =_{df} \mathcal{Y} \subset \mathcal{S} \mid \mathcal{Y} = (\mathcal{C}_E, \mathcal{A}_{\mathcal{D}(\mathcal{S})})$$

Command subsystem is defined as a system; such that, the command components, \mathcal{C}_E , define the object-set of the system and the system dynamic teleological affect relations, $\mathcal{A}_{\mathcal{D}(\mathcal{S})}$, define the relation-set of the system.
