

Dynamic System Property: *atis* **EnvironmentalChangeness**

(Dynamic system properties are those properties that are part of the theory and describe patterns in time as change occurs within a system or between a system and its negasystem.)

Environmental changeness, $\Delta\mathcal{S}'$, =_{df} change in negasystem state.

$$\Delta\mathcal{S}' =_{df} \Delta \mathcal{S}'$$

Environmental changeness is a change in the negasystem state.
