

Dynamic System Property: *atis* Negasystem Environmental Changeness

(*Dynamic system properties* are those properties that are part of the theory and describe patterns in time as change occurs within a system or between a system and its negasystem.)

Negasystem environmental changeness, $\Delta\mathcal{S}$, =_{df} change in system state.

$$\Delta\mathcal{S} =_{df} \Delta \mathcal{S}$$

Negasystem environmental changeness is a change in the system state.
